

S/N 10/539,513

as taken place.
DETD of purified n-heptane was saturated at atmospheric pressure and ambient temperature by an equimolar feed of high purity ethylene and propylene, using a total feed rate of 4 liters per minute. Without interrupting the monomer feed, one millimole of Et₃Al₂Cl₃ and 0.02 millimole of VOC₁₃ (as n-heptane solutions) were added consecutively (A₁/V= 100/1). Immediately, the dropwise addition of 1.0 millimole of iso-amyl nitrate (as of n-heptane solution) was begun and continued throughout the polymerization, a period of min. After minutes, ml. of isopropanol was added to destroy the active catalyst. The solution was then treated with 10 cc.
